MOUNTING INSTRUCTIONS

1.0 Assembling of elements

Extract the telescopic elements unstringing the tube Ø 12 and mount the jointing sleeve fixing the first section by means of the supplied phillips screw. Assemble the second jointing sleeve, string the top tube Ø 8 together with its PVC cap and fix the end section by your phillips screw.

1.1 Placing of elements on the Boom

See the picture.

1.2 Assembling of elements to the Boom

String the tuning element of Gamma Match on one element of the radator dipole, insert the elements into the metal support and fix them by using the screws and key supplied.

2.0 Assembling of Gamma Match

Extract the final tube of Gamma Match to the length L1=220 mm and fix **without locking** the flat end Ø 12 to the connector by using the supplied nut and washer. Move the tuning element towards the Boom stringing the end part Ø 8 of Gamma Match as far as size L=610 mm. Then fix the tuning element by means of screw and key. Check once again the sizes L and L1, lock the nut on the flat part of Gamma Match and mount the PVC protection cap.

3.0 Assembling of bracket to the Boom

See the picture.

PLEASE, PAY ATTENTION. THE GREAT LOCKING TORQUE OF NUTS THAT FIX THE BOOM CAN CAUSE DAMAGE TO THIS LAST ONE.

3.1 Installation to the support tube
